

Innovative Combustion Solutions Worldwide

THERMAIR BURNERS

Fixed air performance allows easy setup and adjustment.

The new Eclipse ThermAir burner is a nozzle-mixing burner with a packaged air blower that's designed to fire with fixed combustion air over a wide gas turndown range. Fixed air operation plus integral air and gas orifices make the ThermAir one of the simplest burners ever to quickly setup and adjust.

Check out these quality construction and performance features:

- Easy to install, easy to operate, easy to maintain. Right or left hand piping; readily adapts to your present system. Burner can be disassembled from the rear.
- Global design: metric/English interfaces.
- 30:1 turndown with UV scanner or Flame Rod*.
- Multi-fuel capability (natural gas, propane, butane) without changing nozzle.
- Direct spark ignition.
- Low NOx emissions: 60 ppm at high fire.

Like all Eclipse combustion products, you can be confident that ThermAir burners are unsurpassed in the industry for quality, safety, reliability and efficiency.

**Flame Rod not available on all models.*

**FOR PROCESS AIR HEATING
AND GENERAL OVEN
APPLICATIONS**

ECLIPSE... The Name that Means Excellence in Combustion Systems Throughout the World

Since 1908, Eclipse has been dedicated to "doing it better." As a result, we can confidently say that nobody's products are better, nobody's application knowledge is greater, nobody's support system is more comprehensive.

Important added-value benefits are built into all Eclipse products and services...benefits that can contribute to a more profitable operation year after year. For no-obligation assistance with your combustion requirements, contact your local Eclipse sales office.
